

HOCHTIEF SOLUTIONS

DYNAMICS AND SECURITY: OUR DATA CENTER SOLUTIONS.

Your plus in the total: all services under one roof.

Your data is certainly safe here.

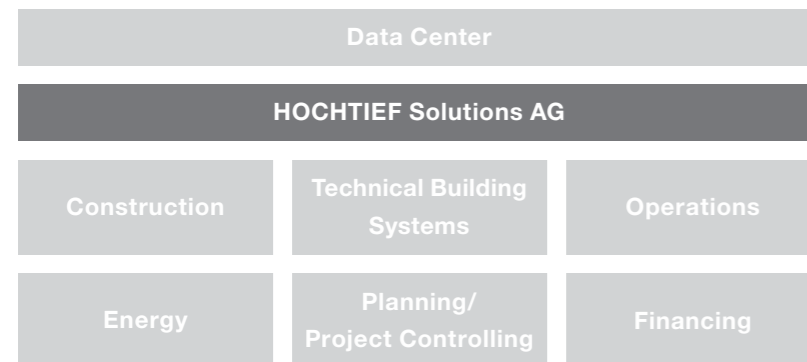

In our interconnected world, the security and availability of data is a vitally competitive factor. When building and modernizing data centers, expertise, competence and reliability therefore count twice as much. It makes sense to have a partner that offers the experience and provides all services under one roof — because fewer interfaces mean less friction and in the end, of course, more security. With HOCHTIEF Solutions, you are on the safe side.

Experts for all phases: planning, financing, construction, operation and energy supply.

HOCHTIEF Solutions covers the entire range of services from planning and financing to construction and operations to energy supply, including contracting. HOCHTIEF Solutions provides you with a needs-based and long-term economic solution. Because you are only dealing with a single contractual partner. Because our experts are charting the course for the highest safety standards and optimum energy efficiency already in the early planning phase. And because we are offering scalable solutions tailored to your needs and your future plans.

Of course, we offer our services also on a modular basis. You can thus opt for only design, construction, operation, or energy supply by HOCHTIEF Solutions. Or you simply rent IT space, built and operated by HOCHTIEF Solutions.

HOCHTIEF Solutions AG as a contractual partner

Modernizing during operations: New power without outages.

We also specialize in reducing energy costs for existing data centers. To this end, our experts put the existing facilities under the microscope in a rough analysis and a fine analysis. We locate potential for optimizing and show you ways to retrofitting while at the same time increasing efficiency. Of course, we can implement the proposed measures without interrupting your operations.

No matter which model you choose — HOCHTIEF Solutions guarantees you secure, flexible and economic outcomes. In every phase of your project, you will have an experienced and competent partner in HOCHTIEF Solutions — and clear communication that makes everything so much easier. This results in data centers that guarantee integrity and availability of systems and data on an economic level.

HOCHTIEF Solutions: Dedicated to sustainability.

In order to improve our customers' energy efficiency, we have made sustainability a key issue at HOCHTIEF Solutions. Because we believe that nothing is more convincing than living an example. Today, we rank among the "Global 100 Most Sustainable Corporations in the World". We are listed in the Dow Jones Sustainability Index and secured Gold Class status in the Heavy Construction sector in the SAM Sustainability Yearbook 2009. We are working on greater energy efficiency with lots of enthusiasm, new ideas and innovative technologies — experience from which our customers benefit when it comes to saving on energy costs and CO₂ emissions.

Data centers with HOCHTIEF: Your benefits

- All services under one roof
- Experience in all areas
- Simplified risk management since there is only one liability carrier
- Simplified controlling since there is only one invoicing partner
- Minimizing of interfaces
