HOCHTIEF Facility Management has won the contract for the supply of the entire electrotechnical equipment for Duisburg's Mercator Tunnel as well as parts of the pertinent service building and for subsequent maintenance of the technical installations over the next five years. The 300m-long tunnel, which is currently under construction, is part of the six-laning of highway A 59 in Duisburg.

The Essen-based service provider will be responsible for aspects including the central control and communication technology, a system for uninterrupted power supply, the fire alarm and lighting systems, and the escape route lighting for the tunnel. Within the scope of its work on the electrics, the company will also handle the installation of cables and the alarm system for the tunnel service building.
